

2011

Teacher Certificate. American Academic Family Physicians, Department of Family Medicine, Residency Program,
WSU, 2011

American Academy of Family Physicians

Sincerely recognizes

Hikmet Jamil, M.D.

for participation as an Active Teacher in Family Medicine.

2010 - 2011

A handwritten signature in black ink, reading "Douglas E. Haly, MD", is written over a horizontal line.

Executive Vice President

2011

Symbol of Iraqi Medical Association. The 40th. Scientific Conference, Sulaymaniyah, KRG, Iraq, September 2011

Iraqi Medical Association (IMA)

We hereby Certify that

Hikmet Jamil, M.D.

Has scientifically participated in the IMA 40th Scientific Conference held in Sulaimany, Iraq, from September 20th -22nd 2011 and thus is awarded this Certificate accordingly

According to the Scientific Universities and Identical Medical Bodies regulations, the Conference designates CME credits for his/her contribution in this Conference.

2011

Special Tribute. Governor of the State of Michigan based on scientific activities particularly among Iraqi refugees and immigrant, June 24, 2011

PETER J. KALABAT, MD

Peter J. Kalabat - received his medical degree from the University of Baghdad in 1960 and completed his internship and residency in Detroit, Michigan. He is board certified by the American Board of Pathology (Anatomic and Clinical). In addition to surgical pathology,

Kalabat's interests are dermatopathology, prostate gland pathology and breast disease pathology. He is the owner and director of Medical Diagnostic Lab, Inc. in Troy, Michigan.

HIKMET JAMIL, M.D, DVD, DIH, PHD, MFOM, FFOM

Hikmet Jamil is professor, Director of OEM Graduate Course at Wayne State University, School of Medicine. Professor Jamil received his medical degree from Baghdad University, followed by postgraduate degrees from England and Ireland. While at Baghdad University Professor Jamil was the program director for postgraduate studies in Occupational Medicine and Community Medicine. He acted as an external examiner for the Board on Community Medicine at the Jordanian Medical Council for seven years. He is the soul author of 18 books (8 academic) & 2 books as first author and 148 research publications in peer review journal, 272 scientific articles.

He has given 185 presentations at national and international scientific meetings. He is president of The International society of Iraqi Scientists (ISIS). He received several awards from different academic institutions, non-profit organizations, WHO and Governmental agency. Now he work as Co-PI for NIMH grant to study mental health in Iraqi refugees: Important of post-displacement social stressors and institutional resources.

WEST BLOOMFIELD — Dr. Hikmet Jamil has won the award of lifetime achievement.

The Wayne State University professor and West Bloomfield resident earned a lifetime achievement award May 28 from the Iraqi Medical Sciences Association for his research on the health disorders of refugees and immigrants.

Jamil, 75, said he was honored by the award, and hopes to continue to improve science and patient care.

"I thought there is a respect of all people — those who work in their field," he said. "Really, I'm glad to see still we have good

people in the area."

Jamil earned his medical degree from the University of Baghdad in 1962 and earned a Ph.D. from the University of Manchester in 1978. He is president of the International Society of Iraqi Scientists, and he also wrote 20 books and was the sole author of 18 of them.

Jamil said he had problems fitting in with the Iraqi government, especially when he won an award from an American association in 1995.

"I was not part of the party," he said, referring to Saddam Hussein's Ba'ath Party. "So usually I was facing always a lot of (pressure) to become part of the party, and I refused."

With some difficulty, he was able to leave Iraq and move to the

United States in 1997, he said.

Today, Jamil teaches occupational medicine at Wayne State. Besides his work on studying the effects of hookah smoking, he currently is working on a four-year study funded by a \$2.6 million National Institute of Mental Health grant. The study observes metro Detroit Iraqi refugees who used to live in wartime conditions as noncombatants. Those refugees are then compared to immigrants from Arab countries who did not have war-torn backgrounds, he said.

The study will look at post-traumatic stress disorder and depression among these immigrants, and how they are affected by mental and social health services, jobs and lan-

Iraqi Medical Sciences Association honors Dr. Jamil with Lifetime Achievement Award

June 3, 2011

A Wayne State University professor of Family Medicine and Public Health Sciences has been recognized for his contributions to medicine and research with the Lifetime Achievement Award from the Iraqi Medical Sciences Association.

Hikmet Jamil, M.D., D.V.D., D.I.H., MS.c, Ph.D., director of Occupational and Environmental Medicine Graduate Courses and a member of the Division of Occupational & Health Sciences, received the award from IMSA President Saad Shakir on May 28 during the association's ninth annual convention in Troy, Mich.

Hikmet Jamil, M.D., D.V.D

"I feel very honored to be recognized for my work," said Dr. Hikmet, whose primary areas of research include Iraqi refugee and immigrant health disorders, and the impact of hookah (water pipe) smoking on health. "Awards such as these are always appreciated, and I will use it to fuel my efforts to improve medical science and the health of those I can."

The IMSA is a non-profit, non-political educational and humanitarian organization whose members include physicians, dentists, pharmacists, scientists and other health science professionals of Iraqi descent. The association works to develop and promote professional, educational, cultural and humanitarian charitable efforts for the community and for Iraq.

Dr. Jamil received his medical degree from Baghdad University. While there, he served as program director for postgraduate

and promote professional, educational, cultural and humanitarian endeavors for the community and for Iraq.

Dr. Jamil received his medical degree from Baghdad University. While there, he served as program director for postgraduate studies in Occupational Medicine and Community Medicine. He acted as an external examiner for the Board on Community Medicine of the Jordanian Medical Council for seven years. The president of the International Society of Iraqi Scientists, he has been recognized with awards from a number of academic institutions, non-profit organizations and the World Health Organization.

He has worked for six years with the Arab Community Center for Economic and Social Services and two years with the Arab American and Chaldean Council in southeast Michigan. He has twice been invited to present by the Iraqi Ministry of Higher Education and Research.

Dr. Jamil is co-investigator of a National Institutes of Health-funded study that is tracking Iraqi refugees in metropolitan Detroit who have been exposed to war in their home country to determine the effect of post-migration factors such as employment, language classes, and mental and social health services in mitigating stress and post-traumatic stress disorder. Metropolitan Detroit has long been home to one of the world's largest populations of Arabic peoples outside of the Middle East. Increasingly, more are relocating to the region to escape the horrors of war and ethnic and religious conflict. According to the U.S. Census Bureau, nearly 35 percent of U.S. residents who were born in Iraq now live in Michigan. This number includes about 12,000 Muslims and 90,000 Chaldeans or Christian Iraqis. Much of the Chaldean population has settled in Oakland and Macomb counties. Many of these new immigrants suffer effects associated with the horrors they saw and experienced in their homeland.

The study, designed to measure stress resiliency and social programs designed to ease post-traumatic stress disorder among Iraqi war refugees, may be the largest to date that investigates stress resiliency and risk factors in Iraqi refugees who have experienced war as noncombatants. It is also the first study ever of refugees in which there will be a mechanism to study a random sample of immigrants at the time they arrive in their host country.

"Dr. Jamil is a respected and internationally recognized occupational and health researcher. He has dedicated his research and services to improving the health and well-being of workers in general as well as vulnerable community members, including persons exposed to war and refugees," said co-investigator Bengt Arnetz, M.D., Ph.D., professor of Family Medicine and Public Health Sciences, and director of the Division of Occupational and Environmental Medicine. "He plays an important role in our occupational and environmental health division's global work on environmental health justice, including studies of Iraqi refugees in Sweden, the Middle East, as well as in Detroit. I am truly delighted that Dr. Jamil has received this distinguished award. It will further cement his commitment to environmental health issues."
